

1. Application configuration

Please open the file: **Application.properties.js**

☐ Network

```
NETWORKS : [{
  key : 'mainnet',
  value : bitcoin.networks.bitcoin,
  api : 'https://blockstream.info/api/',
  explore : 'https://blockstream.info/',
}, {
  key : 'testnet',
  value : bitcoin.networks.testnet,
  api : 'https://blockstream.info/testnet/api/',
  explore : 'https://blockstream.info/testnet/',
}],
USING_MAIN_NET : true,
```

NETWORKS: is an array of our networks. You should not change it.

USING_MAIN_NET: is the value help you to switch between Production mode and Dev mode.
Please set is TRUE when you release on CHPlay or iOS store

☐ Language

```
DEFAULT_LANGUAGE : {
  code : 'en',
  icon : 'GB',
  name : 'English'
},
LANGUAGE_LIST : [{
  code : 'vi',
  icon : 'VN',
  name : 'Tiếng Việt'
},
{
  code : 'en',
  icon : 'GB',
  name : 'English'
}
],
```

DEFAULT_LANGUAGE: is the default language

LANGUAGE_LIST: is the current supported languages.

If you would like to add your own language, please contact us.

☐ Synchronization

```
TIME_FORMATTER : 'MMMM Do YYYY, h:mm:ss a',
SYNC_INTERVAL : 10000,
LOOP : 18
```

TIME_FORMATTER: is the time formatter. Please check this link to set your prefer format <https://momentjs.com/>

SYNC_INTERVAL: is the interval once the transaction has made. It will fetch the data until the transaction is confirmed.

LOOP: is the value to set how many time the synchronization process can run. After that, customer has to fetch the data manually
